Dear Occupant

Winter Heating

The winter heating period (31 Oct – 1 May) is rapidly approaching. Traditionally the start-up of heating systems is the period when most problems occur. It is in your interest to test run your system before 1 Oct, so any problems can be identified and resolved in advance.

We therefore strongly recommend you test run your heating this month (September) so that this will give us a full month to fix any problems you have. It will also avoid a log-jam of jobs in the first week of November when you may well want your system working.

So please, test run your heating system for 24 hours, check it for function, leaks, or other problems. If you do suspect a problem, please let us know by calling the Help Desk on:

0800 707 6000

We thank you in advance for your cooperation.

Yours sincerely

Becca Edwards
